

Rodrigo Corrêa

.NET Software Engineer

+55 47 98848-7414 • rodrigoitj@gmail.com • Itajaí, SC, Brazil • <https://www.linkedin.com/in/rodrigoitj/>

.NET Software Engineer Developer with over 20 years of experience working with a wide range of technologies. Proven track record delivering projects for major brands. Significant contributions to the implementation of systems and intranet portals, with a strong focus on development best practices.

Skills

.NET Core • .NET Framework • Entity Framework • MVC • RESTful APIs • JSON • JavaScript • Nodejs • React • JQuery • MySQL • Oracle • SQL Server • Postgres • MongoDB • NoSQL • Kusto • RabbitMQ • Docker • Kubernetes • Microservices • OpenTelemetry • Prometheus • Grafana • Unit testing • xUnit • TDD • Git • Azure Cloud • DevOps • CI/CD • Design Patterns • Clean Code • SOLID • Scrum • Agile

Professional Experience

Sr. C# .NET Developer • 03/2026 – Now

Wipro • Barueri, SP, Brasil

- Working as a contractor for Microsoft, I collaborate with global teams to support and improve critical Microsoft Azure infrastructure. My role is focused on building reliable solutions that enhance service quality and streamline cloud provisioning through automation.
- In an Agile/Scrum environment, I actively participate in recurring standups and use Azure DevOps for planning, source control, CI/CD pipelines, testing, and release management, helping drive efficient collaboration and high-quality software delivery.

Full Stack Developer • 10/2018 – 03/2026

QUAY • Itajaí, SC, Brasil

- Worked as a .NET Full Stack developer, implementing various types of intranet systems and portals. Now outsourced to the largest power distribution company in Brazil, Equatorial.

Backend Developer • 04/2013 – 09/2018

GRUPOW • Itajaí, SC, Brasil

- I worked as a backend developer, building several applications for major brands such as Mondelez, Pepsico, Microsoft, and Beto Carrero. In most projects, I used PHP with Yii2 and ColdFusion with a proprietary framework.

From **2008 to 2013** I worked as a Full Stack Developer building websites, web applications, and e-commerce solutions for clients and businesses. Contributed to frontend and backend development while promoting best practices, reusable components, and scalable software design patterns across projects and teams.

Projects

CRC - Cloud Readiness Criteria – Microsoft

CRC is an internal cloud infrastructure initiative focused on improving provisioning reliability, operational visibility, and infrastructure inventory management within the Azure ecosystem.

Contributed to the design and development of scalable backend solutions using .NET (C#) and Microsoft Azure services, with emphasis on automation, diagnostics, and service quality improvements. Worked closely with international teams in an Agile/Scrum environment, leveraging Azure DevOps for CI/CD, code management, and deployment workflows.

Key contributions included the implementation of diagnostic and telemetry tools using Kusto/KQL, optimization of infrastructure-related processes, and development of solutions to support cloud resource organization and operational efficiency.

Freight Management System – Equatorial Energia

Designed and developed a freight management system using .NET Core (C#) for one of Brazil's largest energy distribution companies. Architected a real-time tracking solution with WebSockets to deliver instant trip updates, eliminating excessive polling. Implemented resilient SAP integrations with transactional consistency and robust failure handling, and optimized backend performance through batch-processing strategies for large-scale data imports. A highly impactful project that I truly enjoyed building.

Beto Carrero World – E-commerce Platform

Led the technical design and architecture of an e-commerce platform for the largest theme park in Latin America, supporting ticket sales, travel packages, food services, and premium add-ons (e.g., FastPass). Acted as Technical Lead, defining the technology stack, architectural standards, and integration strategy.

Designed a microservices-based, event-driven architecture integrating with ERP systems and multiple payment providers. The platform was deployed on AWS (EC2, SNS, SQS), while my primary focus remained on backend architecture and service design.

Supported up to 500 concurrent users in production and implemented custom reporting capabilities for business insights. A milestone project that strengthened my architectural decision-making under real business constraints.

Santillana (Moderna Brand in Brazil) – B2B Contract & Commerce Platform

Contributed to the development of a B2B commerce platform for managing educational book distribution contracts in Brazil, connecting schools to the publisher's distribution network.

The platform orchestrated ~16 microservices, handling contract lifecycle, pricing logic, and order processing. This was my first hands-on experience with distributed systems at scale, where I implemented unit testing practices and contributed to CI/CD adoption.

Collaborated within a cross-functional team of ~20 engineers, gaining solid experience in service orchestration, inter-service communication, and large-scale team collaboration, establishing my foundation in microservices architecture.

Graduation

Technologist's degree in Systems Analysis and Development • 04/2018 – 12/2020

UNIGRANET • Itajaí, SC, Brazil
